Harlingen, Texas 78552-6634

Dear Keith Goodwin:

In December 2004, MICROCLON Metal Treatment lubricants were added to eight school buses equipped with a Cummins 5.9 diesel engine. Year of vehicle, mileage, and date when product was added were documented and certified mechanics followed the installation instructions supplied in every box. Transportation Department shop supervisor Felipe Pena evaluated the information gathered in late December and compared it with the data collected in late January 2005. The information revealed that there has been a 28% total savings in fuel mileage.

The McAllen Independent School District Transportation Department appreciates the hard work and dedication you have demonstrated, in assuring the McAllen I.S.D Tax Payers that; their tax dollars are being used wisely. MICROLON products have provided a considerable amount of savings and will continue for many years to come.

Sincerely,

Carlos Vargas

Director of Transportation
